

TECHNICAL INFO

Magnetic Float Level Switch

TechMagnet - LSM series

PRINCIPLE

The single unit or multiple reed switch units are housed tightly in stainless steel or engineering plastic stem, and the permanent magnet is sealed into the middle of the specified float ball(s). You can mount the float ball to penetrating through the stem, then the liquid buoyancy will deliver the float ball up and down at the specified position by graduating rings.

When the float internal magnet approaches the reed switch, it will actuate the reed switch contact point to create an open or close circuit. We can apply such on-off output signals to reach liquid level controlling and monitoring purpose. The figures below show the float orientations on N.O. (Normal Open) and N.C. (Normal Close).

Rising float ball to actuate the reed switch

Rising float ball to switch off.

FEATURES

- ★ Multiple points measuring, multiple level points could be for custom-made.
- ★ Employing the magnet to actuate the reed switch requires no power.
Life expectancy of each contact can reach up to 2 million times.
- ★ All output signal wiring are simplified in same junction box (housing) to economize the external wiring construction.
- ★ LSM type magnetic float level switches are more cost-effective than other level switches in terms of multiple points.
- ★ The housing protection is at least IP65.
- ★ Rugged construction and multiple options for materials from engineering plastics as PVDF, PP, PVC, and stainless steels such as SUS304, SUS316, float switches can be applied to versatile applications in chemical corrosion of acidity and alkalinity liquid, solvents or oil fuels.
- ★ The reed switch and lead wire are isolated with liquids absolutely. All stainless steel switches are applicable to high pressure and high temperature environment.

APPLICATIONS

Shipbuilding Industry, Generator Facilities, Petrochemical Industry, Food/Beverage Industry, Waste Water/Water Purified Facilities, Electronic Industry, Dyeing and Finishing Industry, Chemical Industry, Rubber/ Plastic Industry, Hydraulic.

SPECIFICATION

Tube Type	Material	Switching Contact from	Switching Capacity Max.	Switching Voltage Max.	Switching Current Max.	Carry Current Max.

CONTACT PROTECTION CIRCUITS

INDUCTIVE LOADS

When using a reed switch with inductive loads such as motors, relays, solenoids, etc., the contact will be subjected to a high induced voltage during opening of the contact (load circuit).

Such high induced voltage (transients) may cause damages to the reed switch or significantly reduce its life.

Therefore, protective circuits such as: RC (snubber), varistors or clamping diodes are recommended.(refer to Fig.1)

(Fig.1)

$$C = \frac{I^2}{10} \text{ (uF)}$$

$$R = \frac{E}{10I(1 + \frac{50}{E})}$$

★ It is prohibited to connect directly with any solenoid valve, motor or magnetic switch.

CAPACITIVE LOADS

When using a reed switch with capacitive loads such as capacitors, incandescent lamps or long cables, the contact will be subjected to a high surge (inrush) current.

Therefore, protective circuits such as: surge suppressors or current limiting resistors are recommended.(refer to Fig.2)

(Fig.2)

Parallel connection of RC circuit and switch will surge current bypass.

Series connection of resistance and switch limit surge current.

ORDER SPECIFIED

THE PROPERTIES BETWEEN LIQUID AND FLOAT

Please choose the proper float subject to above independent specified terms and chemical characters.

- 1. Temperature:** PVDF Max. 120°C,
PP Max. 80°C,
SUS304/ 316 Max. 200°C
- 2. Pressure:** SUS304/ 316 Float, Max. 35kg/cm²
Engineering plastic, Max. 5kg/cm²
(S10 float Max. 50kg)
- 3. Viscosity:** Please choose smaller S.G. with greater diameter floats to cope with high viscosity liquid applications.
- 4. Chemical:** Please use plastic float for acid/alkaline corrosion of chemical applications. PVDF float is noted for high temperature cases.
- 5. Benzine:** Please choose stainless steel floats to apply in any gasoline, fuel oil, petroleum application.
- 6. S.G.:** The float S.G. Must be smaller than the liquid, otherwise, the liquid buoyancy can not deliver the float upward.

Buyer's guide :

The magnetic level switch can be done as per customer's specified technical data such as the flange, thread, housing, float ball diameter, float ball number, the float traveling up or down actuated position by N.C. or N.O. output, the total float working distance (L) or each

independent float actuating position, please refer the order information to define the application specifications. A single ball driving multiple actuated points is available to apply on the order form.

Example: LSMD B HM 7 S6 3 0405

It is requested the minimum interval for a single ball driving dual actuated positions (D) or neighboring two balls (B), or from the bottom to the lowest ball interval (C) or from the mounting position to the first ball (A), otherwise, there will be some magnetic mutually interference involved by insufficient interval. To ensure the defined distance, please see the data below:

- A= Minimum distance from the mounting position to the highest actuation level.
- B= Minimum distance between any two actuation levels.
- C= Minimum distance from end of the lowest level.
- D= Minimum distance between two actuation levels by one float.
- E= Screw length

People are our prime movers

VERTICAL ADJUSTMENT TYPE

This is a special design for some liquid applications requiring monitoring different actuation levels frequently. The user needs only to loose the hexagon nut, then remove the mounted screw/ flange up or down to achieve the actuated level position adjustment.

- * Applicable at tank interior pressure under 5 kg/cm².
- * Standard specification 80°C, special order of max. 200°C available.
- * Switch contact: 20W/150Vac/250Vdc SPDT
50W/300Vac/350Vdc SPST
60W/220Vac/500Vdc SPST
60W/400Vac/1000Vdc SPDT
- * Customer specified flange/ screw acceptable.

Type → LSMD E (EK) 3 S2 1

Order information

Connection	Pipe Diameter	Float Type
EJ=1-1/2" PT	3=φ9.5	S2= φ41x38
FJ=2" PT	4=φ12.7	S4= φ52x52
EK=1-1/2" 5kg/cm ²	3=φ9.5	S2= φ41x38

* Please specify the l_1 while placing an order.
(Length from lower end of housing to center line of float ball)

TEST ROD

GL Marine Approval 50885-04HH

Function:

When the Test Rod is attached to a magnetic float level switch, user could test the performance of the magnetic switch directly by pulling the handle of the test rod on the top of the switch.

Material:

1. Rod Connection: Bronze
2. Compressed Spring: Stainless Steel
3. Positioning Clip: Stainless Steel
4. Test Rod Stem: Stainless Steel

TYPICAL WIRING DIAGRAMS

▶ AUTO SUPPLY CASE:
SINGLE FLOAT
DUAL SWITCHES

▶ AUTO DRAIN CASE:
SINGLE FLOAT
DUAL SWITCHES

▶ AUTO SUPPLY CASE:
DUAL FLOATS
DUAL SWITCHES

▶ AUTO DRAIN CASE:
DUAL FLOATS
DUAL SWITCHES

Note: The "N.O." Means normally opened circuit of the reed switch (off) in lower liquid level. As the float moves up to the specified higher level, the circuit closed (on).

The "N.C." Means normally closed circuit of the reed switch (on) in lower liquid level. As the float moves up to the specified higher level, the circuit closed (off).

INSTALLATION

- The float level switch should be mounted far away from liquid inlet. Any strong liquid fluctuation will produce error output signals.

- It is advised to place a pipe shield or equivalent device to normalize the switch actuation if the switch is used near agitator.

- It had better require an L type supporter, when the switch is mounted in concrete wall tank as figure below.

- It is recommended to select the standpipe with diameter larger than the float ball for installation process.

CONNECTION DIAGRAMS

- ※  Means that the NC-C circuit will be close while liquid level lower than the float ball, by mark of "↓ ON".
- ※  Means that the NO-C circuit will be close while liquid level higher than the float ball, by mark of "↑ ON".
- ※  Means that the NO-C circuit will be close while liquid level higher than the float ball, and NC-C circuit will be close while liquid level lower than the float ball.

※ Please screw the housing cap tightly and fix the conduit outlet, it will reinforce the housing performance against the moisture and direct water. (ϕ 8mm multiple cord is recommended for wiring)

※ If the end user is intended to adjust the actuation level position independently, please move the float ball(s) position as well as the interior reed switches, otherwise, it will appear an error or no signal.
